

Loading existing reports

100 XP

Let's get you started! We provide you with your very own virtual machine running Power BI. It may take a few minutes to load, but it only needs to be set up once.

Before you start loading data and creating visualizations, it's important you know how to load existing reports. If at any point in the course you lose progress or get stuck, you can load the corresponding report to re-initialize. In this exercise, we'll take a look at a report you will be able to create by the end of this chapter.

*All the reports used in this course are also available for download at the bottom right of the **course page** if you want to open them locally.*
